# Where Better Dentistry Begins

Led by Drs. Dilip Dudhat and Zaid Salman, **D3 Dental** blends advanced technology, preventive philosophy, and human-centered care to redefine modern dentistry.

**D**ilip N. Dudhat, D.M.D., has long believed that dentistry should be equal parts science, art, and service. As the founder and CEO of Dudhat Dental Group and the visionary behind D3 Dental in Horsham, he has spent decades building practices that pair advanced technology with deeply personal care focused not only on fixing teeth, but on improving lives.

That philosophy is on full display at D3

Dental, where Dr. Dudhat has partnered with Zaid Salman, D.M.D., a rising leader in modern, preventive dentistry. Together, they have created a practice that feels less like a traditional dental office and more like a family-centered healthcare environment, one where patients are welcomed, understood, and cared for as individuals.

“Our team culture is built on trust, compassion, and respect,” Dr. Dudhat says. “From the moment a patient walks through our doors, we want them to feel safe, heard, and genuinely cared for.”

Dr. Salman adds, “Many people come to us with dental anxiety or past negative experiences, and our goal is to change that narrative by creating an environment that feels warm, familiar, and judgment free.”

Both dentists share similar training and values. Each earned their dental degrees from Temple University’s Kornberg School

of Dental Medicine. Dr. Salman graduated summa cum laude, ranked No. 1 out of 145 students in his class, an achievement that reflects both academic excellence and an early mastery of clinical decision making and long-term planning.

Dr. Salman’s leadership extends beyond the operatory. During dental school, he served on multiple leadership boards and was elected class president throughout his training, a role that took on added importance during the COVID-19 pandemic. In that capacity, he helped guide his classmates through unprecedented academic and clinical challenges, reinforcing his collaborative leadership style and commitment to communication, adaptability, and patient-centered care.

“Dr. Salman’s skills are excellent,” Dr. Dudhat says. “We share the same approach to dentistry. Rather than relying on reactive

treatments, we focus on long-term solutions that help patients maintain healthy, functional smiles for life.”

At D3 Dental, every treatment begins with data, diagnostics, and thoughtful conversations. The team views the mouth as the gateway to the entire body, and comprehensive exams are designed to uncover the connections between oral health and overall wellness. Growing research linking periodontal disease to conditions such as heart disease, diabetes, and neurological disorders has reshaped how the practice approaches prevention and hygiene.

Salivary diagnostics allow the team to identify the specific bacteria contributing to cavities or gum disease, enabling personalized treatment rather than a one-size-fits-all approach. Periodontal pockets are treated with laser therapy to promote regeneration and eliminate bacteria at their source. In select cases, custom trays are fabricated to deliver therapeutic agents at home, supporting long-term healing and disease control.

That preventive mindset also extends to how early tooth decay is treated. D3 Dental is among a small number of practices in the region offering Curodont, a revolutionary, noninvasive therapy that can help reverse early cavities without drilling or anesthesia. By regenerating enamel at the microscopic level, Curodont allows the team to intervene earlier, preserving natural tooth structure and reducing the need for traditional fillings. It represents a significant shift toward truly preventive, patient-centered care.

“Prevention is always cheaper than the cure,” Dr. Salman says. “By screening early for bacteria, airway concerns, alignment issues, or habits like grinding, we can plan ahead and help patients avoid more complex problems down the road. Our goal is to be proactive, not reactive, and to educate patients so they understand their health and feel empowered in their care.”

The practice also integrates photobiomodulation and red light therapy to reduce inflammation, support TMJ treatment, accelerate healing after procedures, and aid in the recovery of herpetic lesions and oral ulcers. Every operator is equipped with state-of-the-art intraoral cameras, allowing patients to see exactly what the doctors see and better understand their diagnoses and treatment options.

Technology plays a central role in delivering precision and predictability. D3 Dental utilizes the YOMI robotic dental implant system, combining 3D planning with robotic guidance to achieve exceptional accuracy

D3 Dental is part of Dudhat Dental Group, which became the Official Dentist of the Philadelphia Eagles in 2021. The two organizations recently extended their partnership for another five years.

also offers advanced whitening systems such as KOR and Zoom, as well as clear aligner therapy including Invisalign and ClearCorrect to help patients achieve balanced occlusion and long-term restorative success.

Implant dentistry remains a cornerstone of the practice. Together, Drs. Dudhat and Salman have placed and restored more than 20,000 implants throughout their careers, treating cases ranging from single missing teeth to full-mouth rehabilitations and complex implant restorations. Advanced procedures such as LANAP further distinguish the practice, providing minimally invasive solutions for periodontal disease.

That commitment to excellence does not stop inside the office. When Drs. Dudhat and Salman are not treating patients, they are often attending continuing education courses and national conferences, continually refining their skills and exploring new ways to better serve patients throughout Montgomery and Bucks counties. Their focus remains on bringing the most-effective, evidence-based, and patient-centered advancements back

to the communities they serve.

With Dr. Dudhat’s decades of experience and Dr. Salman’s proactive, mouth-to-body, prevention-driven philosophy, D3 Dental represents a new standard of care in Montgomery and Bucks counties, one rooted in understanding how oral health impacts the entire body. By prioritizing early detection, minimally invasive treatment, and long-term planning, the practice helps patients preserve their natural teeth and overall health whenever possible.

At D3 Dental, better dentistry does not begin with a procedure. It begins with understanding. ■

and faster recovery. Advanced CBCT imaging and RAYFace facial scanning provide seamless communication between doctor and laboratory, allowing smile designs to be harmonized with each patient’s unique facial features. In-house SprintRay 3D printing enables same-day or next-day restorations, reducing wait times while maintaining the highest level of quality.

Even routine cleanings reflect the practice’s modern philosophy. AIRFLOW technology gently removes dental biofilm, the primary cause of cavities and periodontal disease, creating a more comfortable and effective hygiene experience. The practice
